

## What is Glympse?

*Glympse* is a fast, free and simple way to share your real-time location amongst a group! Like a group of riders.

Picture on the left shows the Glympse display when active. The two riders – Eman and Darius – have a view of each other on their smartphones.

Column on the right shows all the riders currently sharing their location.

So no more mysteries of where is so-and-so. No stopping and texting – “I’m next to the tree.” How helpful. With Glympse, see where they are, which direction they are going, and how fast they are moving.

To get the app – click on this link:

<http://www.glympse.com/!RedwoodShoresCyclingMeetup>

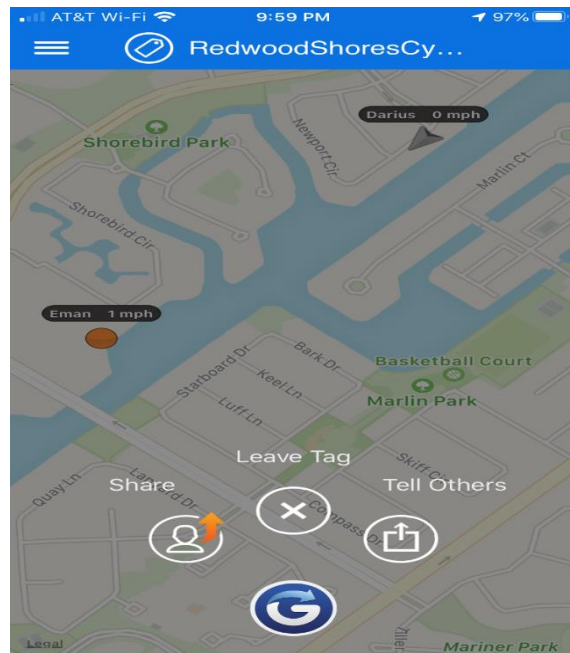

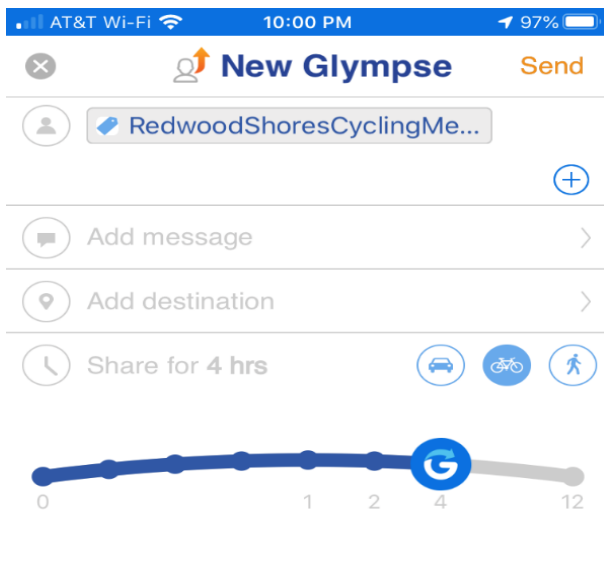

Once installed, tap on the big G at the bottom.

Then tap on “Share”

First time only – enter the tag -  
!redwoodshorescyclingmeetup

Include the “!”.

Use the slider at the bottom to select how long to share. If you have good battery life, share for the duration of the ride.

If you have a wimpy battery, only share when necessary – when you want to know where the group is or you become lost.

Then tap SEND.

Set up your name with something short and unique. Remember a smartphone screen is small and there may be many riders using Glympse. Instead of “Emanuel I-have-the-longest-name-ever Washington”, try “Eman”. Or BobZ.

REMEMBER to turn off Glympse when not in use to conserve battery.
